

Curtains

Caring for your drapes and furnishings

Drapes and furnishing fabrics should be cleaned regularly and vacuumed often, as dust, grime, and smoke from wood or tobacco can be harsh on fabrics.

- **Protect drapes from moisture** — Humidity and condensation can affect fabric sizing and dyes. When combined with heat and fumes, they may cause yellow stains that dry cleaning cannot remove.
- **Limit sun exposure** — Australia's intense sunlight can shorten the lifespan of furnishings. Rotating drapes can help minimize damage. Prolonged sun exposure can also degrade the backing on insulated drapes, leading to peeling, sticking, or separation during cleaning.
- **Regular cleaning is essential** for maintaining the longevity of your furnishing fabrics.
- **Be mindful of shrinkage** — Curtain and furnishing fabrics may shrink and your drycleaning professional should discuss this with you.

By following these care tips, you can extend the life and appearance of your drapes and furnishings.
